Flow chart showing subject attrition from original cohort to current study

Parasternal intercostal electromyography

The parasternal intercostal electromyogram was recorded during ten minutes of tidal breathing using surface silver-silver-chloride electrodes (Kendall Arbo, Tyco Healthcare, Neustadt, Germany) placed over the second intercostal space directly adjacent to the sternal border bilaterally. Subjects were seated comfortably in a chair with trunk, arms and legs supported to minimise cross-talk from postural or upper limb musculature. Signals were amplified (gain 1,000) and band-pass filtered between 10-2,000Hz (1902 Biomedical amplifier, Cambridge Electronic Design, Cambridge, UK) and digitised with an analogue-to-digital sampling frequency of

4,000Hz (PowerLab 8/35, AD Instruments, Sydney, Australia). An additional adaptive mains frequency filter was applied by the acquisition hardware to minimise mains frequency interference. Signals were displayed on a laptop computer running LabChart version 7.2 (AD Instruments Pty, Colorado Springs, USA) and post-acquisition digital filtering applied between 20-1,000Hz to isolate the frequencies of interest. The raw EMGpara signal was converted to root-mean-square (RMS) with a moving average of 50ms. The mean peak RMS EMGpara per breath over the final stable minute of the recording period was reported. EMGpara was log-transformed and expressed relative to predicted based on previously published data [12].

Results

Table 1: Demographics according to LRTI status

The data are presented as median (interquartile) range or n (%).

	No LRTI	Any LRTI	p value
n	21	30	
Sex (male : female)	10 : 11	15 : 15	1.00
Gestational age at birth (weeks)	34 (33 – 35)	33 (29 – 35)	0.069
Very low birth weight (n (%))	3 (14.3)	5 (16.7)	0.137
Extremely low birth weight	1 (4.8)	7 (23.3)	0.119
Birth weight (g)	2260	1773	0.021

	(1576 – 2620)	(1110 – 2151)	
Days ventilated	0 (0 – 1)	1 (0 – 16)	0.176
Bronchopulmonary dysplasia (oxygen dependency at 28 days) (n (%))	2 (9.5)	8 (26.7)	0.167
At assessment:			
Age at study (years)	6.56 (6.30 – 7.25)	7.03 (6.53 – 7.23)	0.405
Height (cm)	118.3 (115.8 – 126.2)	120.5 (117.3 – 124.8)	0.739
Weight (kg)	22.70 (20.63 – 25.18)	21.60 (20.00 – 24.50)	0.576
BMI (kg/m²)	16.1 (14.7 – 16.7)	14.9 (13.9 – 16.7)	0.366

Table 2: Lung function results according to LRTI status

Data are presented as mean (95% confidence intervals) and as z scores unless otherwise stated.

	No LRTI	Any LRTI	p value
FEV₁	0.03	-0.54	
(z scores)	(-0.74 – 0.46)	(-1.03 – 0.81)	0.040
FVC	0.53	0.10	
(z scores)	(0.15 – 1.29)	(-0.94 – 1.16)	0.022
FEV₁/FVC	-1.18	-0.74	
(z scores)	(-1.80 – -0.55)	(-1.63 – 0.08)	0.791
Change in FEV₁ with salbutamol (%)	5.03 (-0.71 – 10.48)	5.88 (-0.87 – 9.02)	0.857
R5	0.60	0.74	
(z scores)	(-0.09 – 1.26)	(-0.12 – 1.29)	0.813
R20	0.16	0.05	
(z scores)	(-0.39 – 0.64)	(-0.89 – 0.73)	0.694
EMGpara	1.36	1.09	
(z scores)	(0.48 – 1.89)	(0.46 – 1.85)	0.928

Table 3 Healthcare utilisation costs according to virus status

Data are presented as mean (95% confidence intervals)

	No LRTI n=21	LRTI n=30	p value
Overall respiratory healthcare costs (£/year)	55.87 (4.27 to 107.46)	166.24 (47.98 to 284.50)	0.134
Overall non-respiratory healthcare costs (£/year)	314.47 (89.95 to 539.00)	539.19 (93.37 to 985.01)	0.174
Respiratory related GP attendances (number/year)	0.57 (0.31 to 0.83)	1.28 (0.69 to 1.86)	0.098
Non-respiratory related GP attendances (number/year)	1.26 (0.72 to 1.79)	1.48 (1.05 to 1.92)	0.259
Respiratory medication costs (£/year)	2.50 (0.83 to 4.18)	11.63 (4.81 to 18.44)	0.062
Non-respiratory medication costs (£/year)	6.04 (0.72 to 11.36)	209.35 (-150.31 to 569.01)	0.009
Respiratory related hospital costs (£/year)	28.21 (-13.17 to 69.59)	98.42 (3.74 to 193.09)	0.551
Non-respiratory related hospital costs (£/year)	253.19 (42.79 to 463.60)	264.50 (97.27 to 431.73)	0.347
